## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 and 3, drawn to methods of treating a viral infection through the administration of Xenon-133, classified in class 424, subclass 1.13.
  - II. Claims 1 and 2, drawn to methods of treating leukemia, classified in class 424, subclass 1.13.
  - III. Claim 3, drawn to methods of treating prion infections through the administration of Xenon-133, classified in class 424, subclass 1.13.
  - IV. Claim 3, drawn to methods of treating bacterial infections through the administration of Xenon-133, classified in class 424, subclass 1.13.

For Group I above, restriction to one of the following is also required under 35 USC 121. Therefore, election is required of one of Groups I-IV, and, if Group I is elected, then election is also required to one of inventions (A)-(B) The inventions of the subgroups represent the elected invention where in the virus is (A) HIV or (B) FLV.

The inventions are distinct, each from the other because of the following reasons:

2. The inventions of Groups I-IV and of subgroups (A) and (B) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions each relate to methods of treating a different

disease, each with a different causative agent. Thus, the methods perform different functions and have different effects.

### *Conclusion*

3. Because these inventions are distinct for the reasons given above, have acquired a separate status in art because of recognized divergent subject matter, and because the literature and sequence searches required for any one of the groups is not required for the others, restriction for examination purposes as indicated is proper.
